

Bonn

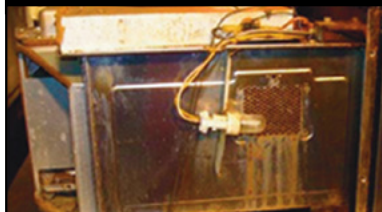

Save money, Improve hygiene.

Say goodbye to the following unnecessary costly repairs!

Ceiling plate damaged due to food particles not being removed

Lamp lens cover missing, causing corrosion to door hinges, oven base & lamp

Stirrer assembly burnt out after leakage of damaged seals

Hole burnt in cavity due to grease penetration under the base plate

Base plate cracked and seals damaged by grease penetration

Protect your microwave with

micro**save**TM by **Bonn**

Microwave oven protection liner

- 1 Reduces costly repairs by up to 80%.
- 2 Hygienic - Prevents cross contamination. Easily removed & washed in the sink or pot washer.
- 3 Extends the life of your microwave.
- 4 Safety - Maintains your microwave in a safe working condition.
- 5 Prevents unnecessary downtime while your microwave is in for repairs.
- 6 Prevents fat, grease and spills inside your commercial microwave from entering impossible to clean places.
- 7 Pest & Rodent free - Prevents cockroaches and mice feeding on fat, grease and food particles inside the internals of your microwave oven.
- 8 Prevents major damage to the stainless steel cavity caused by arcing or sparking.
- 9 Cost effective - Costs no more than the cost of a single repair.
- 10 NSF Approved for the highest of food service standards.

AVAILABLE FOR THE CM-2101T & CM140GT HIGH PERFORMANCE SERIES

An industry first for Bonn microwaves!

Don't purchase a commercial microwave oven without MicroSave™

Why **microsave™** ?

Up to 80% of all commercial microwave oven repairs are caused by spills, food debris and fat/grease spatter when heating food. Fat and grease ingress in particular is the primary cause of failure in electrical components as well as the oven cavity, base plate and ceiling cover.

This results in costly repairs and the reduced working life of your microwave oven. **These repairs are not covered by any microwave oven manufacturer's warranty.**

Fat and grease spatter in the oven cavity combined with poor cleaning practices results in poor hygiene and possible cross contamination of foods.

Poor hygiene often attracts pests and rodents such as cockroaches and mice which are attracted to fat, grease and food particles in difficult to clean locations of the microwave oven. This often results in costly repairs.

What is **microsave™** ?

MicroSave™ is an award winning patented commercial microwave oven liner that is easily fitted inside your microwave oven. MicroSave™ then captures all spatters of fat, grease, spills and crumbs preventing ingress into the sensitive parts of your microwave oven.

MicroSave™ is easily removed for washing and is dishwasher safe for maximum hygiene.

MicroSave™ ensures your microwave oven remains in almost brand new condition.

MicroSave™ is manufactured from high quality, durable pharmaceutical grade TPX polycarbonate and is NSF approved.

MicroSave™ is cost effective, costing no more than the cost of a single minor repair.

Yet another industry first from Bonn and FSM, your Commercial Microwave Oven Specialist.

CPS3A (for CM-2101T) 320 x 300 x 155mm
CPS6A (for CM-1401G) 355 x 360 x 170mm
