

## COMMERCIAL DUTY DEWATERER UNITS

The WastePro II separates solids from liquids, discharging the semi-dry solid waste, reduced in volume by up to 80% into a removable container. This then leaves the residual liquid waste to flow into the drains.

Food waste is processed at the source by the food waste disposer/macerator which is then discharged to the WastePro II. This model is self-cleaning and has an intelligent sensor for detecting when the (wheeled) receiving bin is in position and full.

The unit includes a remote pump to transfer waste from the Waste Disposal unit to the Waste Pro II. Can be connected to a suitable existing waste disposer in stand-alone or trough configuration.

SPECIFICATIONS	F78/020
Capacity Kg / Covers	700 / 1850
Dimensions H x W x D mm	825 x 980 x 450
Weight empty (Kg)	84
Connection to drainage	54mm (up to 1270mm)
Water Usage (Cleaning Cycle)	14 Litres
Compaction ratio	4:1
Electrical: supplied uncorded. 8.6A	380-415V 3 Phase (recommended 16A supply)
Decibals during operation	60DB
Rear Clearance for services:	150mm
